

Hashini Gayathri Suraweera

Final Year CS Undergraduate @ UCSC

✉ hashinigayathrisuraweera@gmail.com

in linkedin.com/in/hashini-gayathri

📄 SUMMARY

Computer Science undergraduate with a strong foundation in software engineering, cybersecurity, cloud computing, and machine learning. Experienced in building full-stack web applications, security analysis tools, and predictive ML models. Passionate about creating secure, scalable digital solutions through continuous learning and hands-on project development.

🎯 SKILLS

Languages:

Python, JavaScript, C, C++

Frontend:

React, HTML, CSS

Databases:

MySQL, MongoDB

Machine Learning:

Data Analysis, Machine Learning

Cloud & DevOps:

Docker, Git, GitHub, Cloud Fundamentals

Cybersecurity:

Network Security, Cryptography

Software Engineering:

OOP, Software Design Principles

Tools:

Linux, VS Code

⊕ LANGUAGES

Sinhala

English

🎓 EDUCATION

BSc in Computer Science

University of Colombo School of Computing (UCSC)

Currently Final Year | Colombo, Sri Lanka

GCE Advanced Level – Physical Science

Anula Vidyalaya, Nugegoda

2020 – 2023 | Colombo, Sri Lanka

📜 CERTIFICATES

(ISC)²: Certified in Cybersecurity (CC)

Fundamentals of Blockchain and Bitcoin

AI in Cybersecurity: Vulnerability, Intelligence, Security, and Ethics

Machine Learning Using Python

Microsoft: Introduction to Cloud Infrastructure

Getting Started with Docker

📁 PROJECTS

UniPulse – University Event Marketing System

HTML · CSS · JavaScript · PHP · MySQL

- Built a centralized event marketing platform for Sri Lankan universities enabling students to discover, manage, and engage with campus events
- Streamlined event promotion, registration, and communication through a single unified system

Password Strength Analyzer

Python-Flask · HTML · CSS · JavaScript

- Developed a real-time password strength checker evaluating length, character diversity, and complexity
- Delivered clear visual feedback to help users understand and improve password security habits
- Deployed on Vercel with a Python-Flask backend

Cafe Brew - AI-Powered Coffee Shop Assistant

Python-Flask · HTML · CSS · JavaScript

- Developed an AI-powered chatbot with NLP capabilities for intelligent real-time customer interactions
- Built a seamless conversational experience using modern web technologies

ZenCrypt – Encrypted Messaging Tool

Python-Flask · CSS · HTML · JavaScript

- Built a secure messaging tool with Base64 encryption/decryption and a modern dark-themed UI
- Implemented real-time encryption, clipboard copying, and password-protected access

LUDO Board Game

C Language · Algorithm Design

- Developed a fully playable console-based LUDO game with 4 AI players and 52-position board logic
- Implemented dice rolling, piece movement, opponent capture mechanics, and random mystery cells
- Built with modular C programming using custom data structures

IPL Cricket Score Predictor with Machine Learning

Python · FastAPI · React · Docker · GitHub Actions

- Built a full-stack ML web app predicting IPL first innings scores using Random Forest Regressor
- Developed a FastAPI REST API backend with a React + Vite frontend
- Containerized with Docker, automated CI/CD via GitHub Actions, deployed on Render and Vercel
